EXECUTIVE PROFILE

Digital transformation leader with 16+ years delivering enterprise SAP S/4HANA, Ariba and data-platform programmes across PTT Group — Global Chemical, PTTEP, Thai Oil, IRPC and HMC. I operate across three connected disciplines that most programmes have to source from three different people: S/4HANA test management, digital transformation programme management, and enterprise data governance.

S/4HANA Test Management — UAT Test Director across 7 functional workstreams and a ~4,060 test-case UAT cycle, owning strategy, execution, defect triage and exit criteria.

Digital Transformation Programme Management — End-to-end delivery from fit-to-standard through SIT/UAT, go-live and hypercare; consolidated 8 fragmented vendor touchpoints into 2 connected portals.

Data Governance & Management — Enterprise DG operating model across 39 data domains, sustaining a 98.80% Data Quality Index against 132 business rules over 5.99M records.

Differentiator: I combine that delivery record with hands-on agentic AI and AI-assisted coding — cutting status reporting effort ~95% (1 day → 15 minutes), PMO administrative overhead ~50%, achieving 98% issue traceability with zero manual follow-up, and surfacing delivery risk 2–4 weeks earlier than conventional reporting cycles.

CORE EXPERTISE

SAP S/4HANA Test Management

Test strategy & master test planning · SIT / UAT execution & test directorship · Entry & exit criteria governance · Defect triage, root-cause analysis & escalation · Test data & environment coordination · Legacy integration and cutover readiness testing · Jira / Xray test management · Tosca & UiPath-assisted execution · Automated test progress & burn-down dashboards

Digital Transformation Programme Management

Programme & portfolio governance · Steering Committee reporting · As-is / To-be E2E process architecture (PTP, OTC, RTR, MTS, PPD, PTA) · Fit-to-standard workshops · Scope, schedule, budget & formal change control · Legacy disposition strategy (retire / re-integrate / re-design) · Vendor, SL, license & contract management · Waterfall, Agile/Scrum and hybrid delivery · Change management & user adoption

Data Governance & Management

DG operating model, charter, policy, standards & procedures · Data domain definition & stewardship enablement · Critical Data Elements (CDE) identification · Data quality rule design, DQI measurement & remediation · Metadata, lineage, data catalog & access control · Data classification, PDPA & security-by-design · Data product & API service delivery · Analytics and data literacy enablement

PROFESSIONAL EXPERIENCE

PTT Global Chemical Public Company Limited — Bangkok

2024 – Present

SAP S/4HANA Test Manager (UAT Test Director) · PTP Legacy Integration Manager

- Direct UAT as Test Director on a strategic enterprise S/4HANA transformation — owning test strategy, test planning, SIT/UAT execution, defect triage and exit criteria across **7 functional workstreams** (RTR, OTC, PTP, MTS, PPD, PTA and Cross-function).
- Govern a **~4,060 test-case UAT cycle**, tracking daily planned-versus-actual burn-down, ageing of open defects and readiness against defined exit criteria.
- Manage end-to-end integration between S/4HANA and legacy systems for the Procure-to-Pay workstream — interface design review, integration testing, defect resolution and cutover readiness across **8 applications**.
- Built Jira-connected dashboards and Python/REST-API reporting automation: status reporting effort reduced from ~1 day to ~15 minutes (**~95% reduction**), PMO administrative overhead down **~50%**, and **98% issue traceability** with zero manual follow-up.

- Deliver executive UAT checkpoint presentations to the Steering Committee, surfacing schedule and quality risk **2-4 weeks earlier** through automated delay-analysis and issue-ageing analytics.

Thai Oil Public Company Limited — Bangkok

2023 – 2025

Data Governance & Security Lead / PMO

- Led data security and data governance initiatives across enterprise data assets — implementing data classification, content-handling standards and governance-by-design controls.
- Embedded governance checkpoints into the project delivery lifecycle so that data quality, access control and privacy obligations were designed in at solution stage rather than remediated after go-live.

PTT Exploration and Production Public Company Limited — Bangkok

2023

S/4HANA PMO Lead · Project Manager, GEP Smart

- PMO Lead for the S/4HANA post-assessment, consolidating findings into a prioritised transformation roadmap for executive decision-making.
- Project Manager for the GEP Smart source-to-pay implementation across the full delivery lifecycle, including license management and vendor contract governance.

PTT Global Chemical Public Company Limited — Bangkok

2019 – 2023

Data Governance & Management Lead

- Designed and implemented the enterprise data governance operating model, policy set, standards, procedures and adoption programme — assessing four operating-model options (distributed, centralised, hybrid and outsourced) against speed, cross-BU reach and internal capability retention to inform the executive decision.
- Identified and mapped **39 enterprise data domains** across the end-to-end value chain and support functions, classified for PDPA sensitivity, and sequenced adoption by use-case priority.
- Established the **Data Quality Index** and its measurement formulas — the framework now sustains **98.80% DQI against a 98.00% target**, running 132 business rules over 5.99M records with dimensional scoring for accuracy (99.37%), completeness (99.90%), validity (97.33%), uniqueness (98.64%) and reliability (95.42%).
- Drove data quality adoption across SAP and non-SAP sources, growing implemented DQ coverage for SAP master data from **>40% (2021) to >60% (2022) to >80% (2023)** across Material, Equipment, Vendor, Customer, Asset (RMA), Employee, HRM and HRD domains.
- Led data domain setup and data stewardship enablement across multiple concurrent digital initiatives (FIT, dEX and IT digital use cases), running stewardship sprints covering 6 then 16 data domains.
- Delivered the data platform and data-product layer — integration, ingestion, cloud and on-premise storage, data product service and self-service advanced analytics — and shifted delivery focus to API-based data services for project use-cases and data science teams.
- Built data literacy and change management programmes, deploying online training organisation-wide and moving governance from project mode into sustained BAU operation.

PTT Digital Solution Company Limited — Bangkok

2009 – 2019

SAP & Legacy Project Manager

- Led SAP ERP (ECC / S/4HANA) and SAP Ariba implementations across PTT Group companies — **GC, Thai Oil, HMC and IRPC** — specialising in Procure-to-Pay and Source-to-Contract process integration.
- Drove end-to-end SAP-legacy integration from fit-to-standard through SIT/UAT, go-live and hypercare, delivering scalable and compliant procurement solutions.

SIGNATURE PROGRAMME — VENDOR MANAGEMENT & COLLABORATION SYSTEM (VMCS)

Owned the as-is / to-be end-to-end Procure-to-Pay process architecture and legacy disposition strategy for a group-wide vendor transformation. Consolidated 8 fragmented vendor touchpoints — paper registration, GEP vendor registration, GCME-VMS, Smart Work Request, PO Tracking, Shipping Management, Smart Receiving and Payment Tracking (8 systems, 4 registrations, 3 logins, no single view of the vendor) — into 2 connected portals delivered as 3 modules: Vendor Collaboration Portal, Vendor Management Portal and Procurement Operation Support Portal. Classified every legacy application as retire, re-integrate, re-design/re-build or report-and-analytic, and built the transition plan around the Ariba downstream contract expiry (Aug 2026) and GEP contract expiry (Sep 2025).

AI-AUGMENTED DELIVERY TOOLKIT

Jira REST API pipelines feeding live UAT progress, defect-ageing and delay-analysis dashboards · automated UAT scheduling and issue auto-notification to owners · Python and Power BI reporting automation · Copilot and UiPath-assisted PMO workflows · agentic AI workflows for status consolidation and risk detection. Outcome: ~95% less reporting effort, ~50% less PMO admin, 98% issue traceability, and risk visible 2–4 weeks earlier.

TECHNOLOGY & TOOLS

- SAP:** S/4HANA, ECC, SAP Ariba, GEP Smart, IS-OIL; MM, PM, PS, SD, PP, QM, FI-AA integration
- Testing:** Jira / Xray, Tosca, SIT & UAT management, defect and RCA workflows, cutover and integration testing
- Data:** Informatica, data catalog and lineage tooling, data quality rule engines, Power BI, Tableau, SQL, Python
- Delivery:** MS Project, Jira, GitHub Projects, Monday.com, Notion, Agile / Scrum, Waterfall, Hybrid; Copilot, UiPath, agentic AI

EDUCATION

Master of Science, Information Technology (Information Systems) King Mongkut's Institute of Technology Ladkrabang (KMUTL)	2009 – 2011
Bachelor of Science, Information Science (Management Information Systems) Walailak University	2004 – 2007

LANGUAGES & WORK PREFERENCE

Thai (native) · English (professional working proficiency). Seeking hybrid engagements combining remote delivery with on-site programme presence, across Thailand and South-East Asia.
